Second Reader: \_\_\_\_\_, \_\_\_\_\_  
Professor Jan Rabaey      date

# Acknowledgements

I would like to thank Professor A. Richard Newton, my advisor, for his great support and encouragement of my research efforts. He has taught me the most valuable lessons that I have learned in graduate school, specifically:

- (1) That graduate school is a voyage of self-discovery, where one learns about oneself and finds one's individual way of learning and researching, and
- (2) That one must always remember the big picture, and ask, "what is necessary to change the world?"

I appreciate Professor Newton's willingness to share his extensive academic, industry, and life experiences with me, as well as his willingness to provide the resources, freedom, and the occasional strict deadline I needed to complete my work.

I would like to thank Professor Jan Rabaey for being the second reader of my report and for giving me useful feedback and support.

I greatly appreciate the assistance of Francis Chan, who handled the client side of the WELD networking infrastructure. His contributions to my life over the past two years, as project partners, colleagues, and friends, have been immeasurable, and I owe him much for the support and effort that he put into our project and friendship.

Michael Shilman and James Young were instrumental in this project as well, offering helpful input and ideas when asked and joining us when we needed to take a break and refresh our minds.

The work described in this report was supported in part by DARPA under contract DABT64-95-C-0074-NEWTON-6/96, Digital Equipment Corporation, and Intel. Their support is gratefully appreciated.

Finally, last but definitely not least, I would like to thank my family and friends for their countless contributions to my work and their key roles of listening to me, offering feedback, and just generally keeping me sane as I wrote this report!
